

RESORBA®

Originally founded in 1931 as a manufacturer of surgical suturing material in Nuremberg, RESORBA® has long stopped representing only production and sales of state-of-the-art wound closure products.

Secure and reliable haemostasis and tissue regeneration are important parts of surgical interventions. For this, AMS offers a broad product range of collagens and oxidised cellulose with its RESORBA® brands. AMS also sells collagen products with antibiotics.

Injured or destroyed tissue layers should be closed as quickly as possible in nature, in order to preserve proper function. In the human body, repair takes place through phases of wound healing. This natural process often requires mechanical and biological support. With its broad product range,

AMS has also been highly valued in the area of endoprosthetics for many years.

RESORBA® can offer solutions for special situations. State-of-the-art products in the area of tissue adhesives are available as well.

Our core competences, coupled with the experience of more than 80 years, makes RESORBA® an innovative driving force on the market for surgical wound treatment. The needs of hospitals and resident physicians are served equally.

Since December 2011, RESORBA® has been part of the AMS – Advanced Medical Solutions – group of companies. The strong RESORBA® brand with direct access to the European market lays the foundations for a shared and successful future.

Our qualified employees are working constantly on further development and improvement of our products. We are therefore able to react to the ever-growing challenges of doctors and medical staff.

Our focus is on the development and production of innovative and practice-oriented solutions for the good of users and patients.

Therefore, we put great value on an active technical exchange with you.
